TSS Global Platform

Enterprise-Grade Solutions for Any Business, Anywhere.

The TSS global platform is a **highly-peered, low-latency, multi-terabit network** which connects major hubs to strategic data centers all around the world. This allows TSS to provide clients with connectivity that rivals any major carrier, coupled with the predictable billing and high-touch support that major carriers refuse to sustain.

TSS has crafted a global network that is fast, flexible and reliable; with **strategic peering relationships**, **adjustable network services**, and **99.99% uptime** monitored by a **24/7/365 Network Control Center**. We are committed to providing enterprise-grade continuity to all TSS clients by actively cultivating our position at the vanguard of internet technology.

"Stellar Support"

"We've been using TSS for almost 3 years. They are not inexpensive, however we've only experienced excellent performance, great uptime and stellar support. Not everything is perfect, but when we have an issue they are very quick to respond and fix it. Thank you TSS!"

- CAREL BEKKER

Powerful Managed Dedicated Servers

The System | Our Servers |

Why Choose a Managed Server?

Managed dedicated servers put all the power you need under your complete control. Your server is installed in one of our state-of-the-art datacenters so you are assured of maximum uptime and reliability. Your data resides on a server that you alone control, the resources are not shared with anyone else. A managed server provide you with real resources that are dedicated entirely to you. Your data is safe, secure, and 100% under your control. What's more, backed by our expert team of admins and technicians you can rest assured that we've got your back. We'll make sure you don't experience any surprises and that your new server stays up and running strong now, and well into the future.

What are some benefits of a managed dedicated server?

The benefits of a managed server from Total Server Solutions are many. Not only do you get 100% control of your server, you get access to all of the hardware resources and storage that are unique to your server. Sharing is fine for some things but not when you've got a resource hungry site that needs power.

The server is the beginning.

Add CDN, DDoS protection, and great software to build your own infrastructure on our rock solid foundation.

All of our servers include our Total Server Management plan.

⊕ CPU TYPE	INTEL E3-1241V3	DUAL INTEL E5-2620V3	DUAL INTEL E5-2640V3

Chat with an Expert

Hardware

Your server is loaded with the highest quality hardware available. We don't use refurbished equipment from craigslist. Everything we deploy for you has been tested and is ready for use. You can rest assured that your hardware will be reliable. In the rare event of a problem though, our technicians have the spare parts, knowledge, and drive (yep, that was lame pun) to do any repairs and replacements needed to keep your data flowing and your server up. #Uptime!

Software

In addition to the great equipment we've got a vast array of software licenses available to fill nearly any need you have. From web hosting control panel applications like cPanel and Plesk to auto installers like Fantastico as well as a full range of Microsoft licenses, we've got you covered.

Locations

Where are you located? Where are your customers located? Wherever you are there's a great chance that one of our facilities is close by. We've got locations with massive connectivity and redundant power throughout the United States as well as the UK. Choose from any of the following locations:
